Java Class File Format

모두 Class File Format에 대한 그림이다. 이후의 슬라이드에서 이 그림들을 이해해보자.

```
ClassFile {
    u4
                   magic;
    u2
                   minor version;
                   major_version;
                   constant_pool_count;
                   constant_pool[constant_pool_count-1];
    cp info
                   access_flags;
                   this_class;
                   super_class;
                   interfaces_count;
                   interfaces[interfaces count];
                   fields_count;
    field_info
                   fields[fields_count];
                   methods_count;
    method_info
                   methods[methods_count];
                   attributes_count;
    attribute_info attributes[attributes_count];
                                              from Oracle
```

Java Class File Format

```
ClassFile {
                   magic;
    u4
    u2
                   minor_version;
    u2
                   major_version;
    u2
                   constant_pool_count;
                   constant_pool[constant_pool_count-1];
    cp_info
                   access flags:
   112
    u2
                   this_class;
    u2
                   super_class;
